

Curera® Back Pillow

Pillow with wing for lateral positioning/side support

Movement serves as a protective mechanism against pressure ulcers and other bed-related complications. Individuals with decreased sensation, limited mobility, and/or altered consciousness may lack the ability to respond to the body's warning signals, such as pain or discomfort.

In such situations, individuals may need support and relief in lying and sitting position. Our product series of positioning pillows is used as an aid to relieve pressure and provide support during positioning and position changes, benefiting both the individual and the caregiver. Regular, minor adjustments in position are often enough to ensure proper blood circulation⁽¹⁾, thereby reducing the risk of pressure ulcers.

Example of positioning

Curera® Back Pillow is a winged-pillow for back relief. The wing is placed under the individual to keep the pillow in place.

CE

Technical specification	
Filling	50 % HR foam, 50 % polyester fibre
Sizes	50x85 cm
Cleaning instructions	Pillow: Machine wash at max. 95 °C. Can be tumble-dried or dried in an airing cupboard; avoid over-drying. For faster drying, run the spin cycle three or four times.
CE-marking	Registered and marked in accordance with MDR (EU) 2017/745
